

The climate phenomenon known as "El Niño" occurs in years when Pacific Ocean waters off the coast of Central and South America become warmer than usual. El Niño can make California wetter and warmer, the southern U.S. wetter and cooler, the northwest and central states warmer and drier, and the mid-Atlantic and northeast warmer on the whole, but prone to big snowstorms.

El Niño

Scientists believe that we could see a very strong El Niño effect this winter. You can learn more about how El Niño might affect our weather at NOAA.gov.

REALLY Hot Chocolate!

Monday, December 14	Tuesday, December 15	Wednesday, December 16	Thursday, December 17	Friday, December 18
